

# Let's Talk about the Birds and the Bees

## Now you can do something about warehouse bugs and pests

At JIT, we offer a lot more than just forklifts. When the weather warms up, many warehouses tend to keep doors and windows open to bring in fresh air. The problem is, critters and insects can find their way inside too. Use our bug, bird, and rodent barriers to bring the fresh air in and keep the pests out!

## Prevent Warehouse Theft

### Both internal and external

We provide a wide variety of theft prevention devices to protect your materials and products. Choose from cages, mezzanines, wire mesh walls, and enclosures. Our team can look at your warehouse and concerns to help determine the best options for your operation.

## Is Space an Issue for Your Warehouse?

### We can help

If space constraints are keeping your warehouse from reaching its full potential, our team will find a solution. We can get you into a smaller forklift that works for your needs and allows you to shrink the aisles and accommodate more shelving.

## Save Time and Labor

### With pallet flow racking

A customer of ours used to spend hours every day continuously moving product on their racks. Then our team told them about flow racking that utilizes gravity roller tracks to move pallets effortlessly from the feed side to the pick up side. We were also able to add more vertical storage to free up valuable floor space.

**Pallet flow racking increases productivity and throughput. Talk to our team to see if flow racking is right for you.**
