

# Increase Warehouse Capacity and Save Time

## Using pallet flow racking

Store more product and make it easier to retrieve with these pallet flow racking systems. They use gravity roller tracks to move pallets effortlessly from the feed side to the pickup side, so you can increase your storage capacity without moving products often. Plus, moving pallets can be tightly controlled with their motion and breaking control features.

# How to Reduce Your Labor Needs

## Implement Toyota automated guided vehicles (AGVs)

Toyota AGVs load and carry your products from one area of your operation to another without the need for people to manage the process. The AGVs can follow a predetermined route, learn your facility, avoid obstacles, and react to changes in the environment, which frees up your labor and helps avoid accidents and damage to products.

# Boost Productivity with Toyota Stand-up Riders

## We have multiple units in our rental fleet!

Easily navigate through narrow aisles and carry loads weighing up to 4,000 lb using our rental stand-up riders. Save time with their top speed of 7.5 MPH and dock-to-stock capabilities that allow you to move product from the loading dock right to the storage racks.

**Rent one or multiple units by the day, week, or month!**
